

Client feedback of 29 August — implementation report

Report date 31 August 2026
Source Website (Feedback)29.8.2026.pdf
Branch main

The feedback deck is fourteen annotated screenshots covering Home, the shared footer, the product categories and Contact. Each annotation was sorted into one of three kinds, because they are carried out in different places by different people: a **layout** item is a code change shipped by a deploy; a **content** item is a value in the CMS that no developer needs to touch; a **blocked** item needs something from the client first.

That split is not bookkeeping. A content item "fixed" in code gets overwritten by the CMS on the next edit, and a layout item cannot be fixed in the CMS at all, because there is no field for it.

15 layout items — all done, in code, verified in a browser	21 content items — listed with exact field and value, for the admin	3 blocked or needing a decision from the client
--	---	---

The one real bug in the deck

“Need the sliders within the full screen, still need to scroll down to see the full image”

This was marked *Old Feedback*, meaning it had been reported before and had not been fixed. It had not been fixed because it was not a matter of taste — it was arithmetic.

The viewport height was applied to the hero's copy block, with the slider control row sitting underneath it as a sibling. So the section came to one viewport *plus* the height of the controls, and the bottom of every slide fell below the fold — at every screen size, on every slide. Measured overflow was **76 px** at 1440×800, 1366×640 and 390×780 alike, which is exactly the height of that control row.

The height now belongs to the section, and the copy takes whatever space is left after the controls. Overflow is **0 px** at all three sizes.

Layout changes — all done

#	WHERE	WHAT THEY ASKED FOR, AND WHAT CHANGED
1	Home · hero	Slider must fit the screen. Fixed as above — 76 px of overflow at every size, now zero.
2	All pages · search	“Search icon is missing, need to add.” The icon had shipped switched off because it had nowhere to go. There is now a real product search behind it: a full-screen dialog over a blurred backdrop, matching every product by name, range, sub-brand, sub-category and pack size, with arrow-key selection and Ctrl/Cmd-K or / to open it. Choosing a result opens that product's own detail dialog on its range page, rather than growing a second, thinner product view inside search. <i>Correction: an earlier draft read the deck's marks on this slide as “remove the eyebrow”. They marked half of each eyebrow, not the whole line — that is a wording change and is now item 6–11 on the content list.</i>

#	WHERE	WHAT THEY ASKED FOR, AND WHAT CHANGED
3	Home · hero	Remove 01 / 06 – ALL ITEMS. Gone. The dots stay: they are the control, and the only thing left that says how many slides there are.
4	Home · hero	Reduce the opacity, all sliders. The scrim over the photograph drops from 0.93 to 0.72 at its darkest edge, and now reaches full transparency at the right instead of 0.04. White headline contrast still clears AA.
5	Home · hero	Increase the visibility of the two arrows. They were a hairline outline sitting directly on a photograph. They now have a ground of their own and a stronger border.
6	Home · band	Headline to the top of the section. It had been vertically centred on an earlier instruction; that is now reversed.
7	Home + all pages	All social icons bigger. Home band 28 → 34 px. Footer 17 px glyph in a 40 px disc → 24 px in 48 px.
8	All pages · header	Menu bar hides on scroll down, returns on scroll up. Done by transform rather than by changing the bar's box, because the hero measures itself against the bar's height and anything that alters it would move the fold. Three guards: nothing in the first bar-height of scroll, a 6 px deadzone so trackpad jitter cannot flap it, and forced back whenever keyboard focus enters it.
9	All pages · footer	Add "Phone:" and "Email:". Both lines labelled, with the label outside the link — "Phone:" is not a phone number and should not be clickable as one.
10	All pages · footer	Replace the social icon treatment with the reference. White discs carrying each platform's real logo, as drawn in the deck. The translucent outlines were near-invisible on the brand red; a white plate also means four different brand colours never have to work against it.
11	Product dialog	Remove the category eyebrow from every item in every category. Gone from all 38 SKUs.
12	Product dialog	"Pack Size —", and carton quantity below, not beside. Now reads Pack Size – 12 Pcs Paper Box with 1728 Pcs Ctn . on its own line under it.
13	File & Folder	No item-wise segregation; all items on one page. Built as a per-range switch in the CMS rather than a slug in the template, so it stays true if the ranges change. See the note below on how it is named.
14	Contact	Add a "Frequently Asked Questions" button, unclickable for now. Rendered as a genuinely disabled button, so it announces that it cannot be used to a screen reader as plainly as it reads by eye.
15	All pages · footer	Use their own artwork for the footer texture. Supplied on 30 August and now what the footer draws; the marks it used to generate are gone. Stored as white-on-transparent rather than as their picture, so the footer colour stays a token instead of being frozen into an image — and so it can tile, which matters because the band is 292 px tall on a desktop and 510 px on a phone. 7.8 KB.

Why the File & Folder switch is called `hide_subcategory_tabs`

The CMS bootstrap creates fields but never updates one that already exists, so a new column arrives `null` on every existing row — and `null` is falsy. Had it been named `show_subcategory_tabs`, simply applying the schema on the server would have switched the filter row off for *all five* ranges at once. Phrased as "hide", the default is the behaviour that is already there, and only the one range that opts in changes.

Verified, not assumed

Every change was checked in a headless browser against the running site rather than by eye. The measurements below are the actual assertions that ran.

CHECK	RESULT
Hero fits the viewport	PASS — overflow 0 px at 1440×800, 1366×640 and 390×780 (was 76 px at all three)
Hero eyebrow & counter	PASS — neither element present; 6 slide dots still rendered
Header auto-hide	PASS — hidden=false at top, true after scrolling down, false again after scrolling up
Band heading position	PASS — align-items: flex-start, 80 px above the copy and 257 px below it
Footer social marks	PASS — all four on rgb(255, 255, 255) discs of 48 px with 24 px glyphs in their own brand colours
Footer contact lines	PASS — reads "Phone: 01842-024378 Email: info@gradebd.com"
Product dialog	PASS — no eyebrow; two pack lines, "Pack Size — 12 Pcs Paper Box" then "1728 Pcs Ctn."
File & Folder	PASS — 0 filter tabs, all 11 items visible; Pen unchanged and keeps its row
Contact FAQ button	PASS — present, and disabled is true
Footer artwork	PASS — tiles with no visible join at 1440, 1920 and 390 wide; all four edges of the drawing are clear of ink, so a seam widens the gaps between marks rather than cutting one
Search	PASS — opens focused on the field; "champ pencil" and "pencil champ" both return the same 6; a non-match says so; arrows mark a row while the caret stays in the field; Enter lands on /school-stationery/?item=school-stationery-02 with that dialog open and the right tab active
Console	PASS — no errors on any page visited

Home · the whole slide inside one viewport

1440×900. Header and slide together come to exactly the window height — nothing of the slide sits below the fold. No eyebrow, no 01 / 06 counter, lighter scrim, and the arrows now carry their own ground.

Footer · social marks and labelled contact lines

The client's own artwork is now the footer texture, at 1440 px wide. White discs with the real platform logos, matching the reference in the deck; "Phone:" and "Email:" labels added. **Two things still outstanding here are content, not code:** the lockup is still the red-on-red vector rather than the white one, and "Stationery · Dhanmondi, Dhaka" is still in the bottom-right — both are single fields in the CMS, listed overleaf.

Search · the header icon now opens this

Every product, matched on name, range, sub-brand, sub-category and pack size. Words match in any order, so “pencil champ” finds what “champ pencil” does. Choosing a result lands on that range with the product's own detail dialog already open, and switches the sub-category tab so the card is behind it rather than in a group that is off screen.

Product dialog · the pack block

Category eyebrow removed; pack sizes now labelled with the carton quantity on its own line. “price quoted on enquiry” is still showing — that is a CMS field (site.price_note) and is item 4 on the content list.

What is left, and who does it

Content — 21 changes, about fifteen minutes in the admin

Full instructions, with the current value and the exact new value for each field, are in `docs/feedback/production-content-changes.md`. Summary:

#	FIELD	CHANGE
1	<code>site.show_search</code>	off → on — the search behind it is real now
2	<code>site.logo_reversed_stationary</code>	red vector → the full-white lockup
3	<code>site.footer_note</code>	“Stationery · Dhanmondi, Dhaka” → empty
4	<code>site.price_note</code>	“price quoted on enquiry” → empty
5	<code>site.phone</code>	→ +88 01842-024378
6–11	<code>home_slides.eyebrow</code>	all six slides: drop Dhaka, Bangladesh and the Range 0N prefix, keeping the half that names something
12–13	<code>home_slides</code>	Exercise Book slide: new image, and label → Grade NEO Exercise Book
14	<code>home_slides</code>	File & Folder slide: image without the clipboard
15	<code>categories.hide_subcategory_tabs</code>	File & Folder → on NEW FIELD
16	<code>items.image</code>	the four Pen photographs BLOCKED
17	<code>contact.form_eyebrow</code>	“Enquiry form” → Query Zone
18–19	<code>contact.form_heading</code> <code>contact.form_sub</code>	both → empty
20	<code>contact.visit_eyebrow</code>	“Visit or call” → Address
21	<code>contact.map_embed_url</code>	the Google Maps embed URL BLOCKED

One deploy step comes first

This round added two CMS fields. On the server, after pulling: `npm run directus:bootstrap -- --schema-only` then `npm run directus:bootstrap -- --fill-empty`, and rebuild the site container. The first creates them; the second uploads the footer artwork into its field. Without the first there is nothing in the admin for item 15 to switch.

Blocked, or needing the client's decision

ITEM	WHAT IS NEEDED
Footer background RESOLVED	Their design arrived on 30 August and is in. For the record, since they asked for the size: the band is full-bleed × 292 px on desktop and 510 px below 1024 px wide, with a separate 56 px copyright bar beneath. Their file is

ITEM	WHAT IS NEEDED
	1520×348 — 292 of band plus a 56 px bar — so they had drawn it straight onto a screenshot of the real footer and the numbers already matched. Any future version can be dropped into the CMS field rather than deployed.
Pen photography	“from the drive we shared” — the link has not reached us. Four images, one per Pen item.
Google Maps	The <code>maps/embed?pb=...</code> URL from their own listing. The page already renders a real map as soon as the field has a value, and shows a labelled placeholder until then, so nothing looks broken while we wait.
Map heading alignment	Measured on the current build, “Google Map Location” and “Head Office” already sit on the same line, each flush with its own column. Nothing is out of alignment — this may have been read from an older deploy. Worth re-checking before anyone changes it.
“Stationary” vs “Stationery”	Their logo artwork spells it Stationary ; every content document they have sent spells it Stationery . Still unresolved, and now baked into a logo file. Also “Greade NEO Exercise Book” in the deck has been read as “Grade”.

Triage of every annotation: `docs/feedback/client-feedback-2026-08-29.md` · content instructions: `docs/feedback/production-content-changes.md` · code: on `main`, from commit `3887531` onward.
